Project 3

Dynamic Calculator

- **Overview:** Engineered a responsive, cross-platform calculator application focused on delivering real-time mathematical operations with a seamless user experience.
- **UI/UX Design:** Built a dynamic, mobile-first interface that adapts fluidly to various screen sizes. Prioritized clear visual hierarchies for keypad inputs and an intuitive display screen.
- **Technical Implementation:** Programmed the core calculation engine to process sequential operations and handle edge cases, such as floating-point precision. Utilized event-driven architecture to instantly update the UI in response to user interactions.
